

Low Noise Bottom Port MEMS Microphone

DESCRIPTION

The ZTS6556 is a high quality, low cost, low power analog output bottom-ported omni-directional MEMS microphone. ZTS6556 consists of a MEMS microphone element and an preamplifier. ZTS6556 has a high SNR and flat wideband frequency response, resulting in natural sound with high intelligibility. Extra EMI filter for RF noise attenuation is built inside. Due to the built-in filter, ZTS6556 shows high immunity to EMI.

The ZTS6556 is available in a thin 2.75mm × 1.85mm × 0.90mm surface-mount package. It is reflow solder compatible with no sensitivity degradation. The ZTS6556 is halide free.

APPLICATIONS

- Mobile telephones
- Smart phones
- PDAs
- Digital video cameras
- Portable media devices with audio input

ORDERING INFORMATION

PART	RoHS	Ship, Quantity
ZTS6556	Yes	Tape and Reel, 5.2K

FEATURES

- Small package
- Flat Frequency Response SNR of 64dBA
- Low Current
- Max RF protection
- Ultra-Stable Performance
- Standard SMD Reflow
- Omni-directional

Typical Applications

The ZTS6556 output can be connected to a codec microphone input or to a high input impedance gain stage. A dc-blocking capacitor is required at the output of the microphone.

Connect to Audio OPAM

Note:

All Ground pins must be connected to ground.

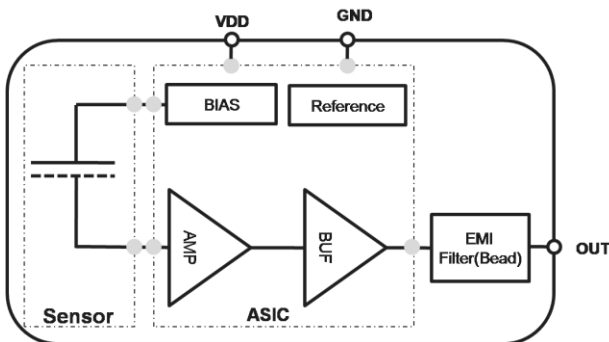

Capacitors near the microphone should not contain Class 2 dielectrics.

Absolute Maximum Ratings

V_{DD} to Ground-0.5V to +5V
 OUT to Ground.....-0.3V to $V_{DD}+0.3V$
 Input Current to Any Pin..... ± 5 mA
 Temperature Range.....-40°C to +100°C

CAUTION: Stresses above those listed in “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

Electro-Static Discharge Sensitivity

This integrated circuit can be damaged by ESD. It is recommended that all integrated circuits be handled with proper precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure.

SOLDER FLOW PROFILE

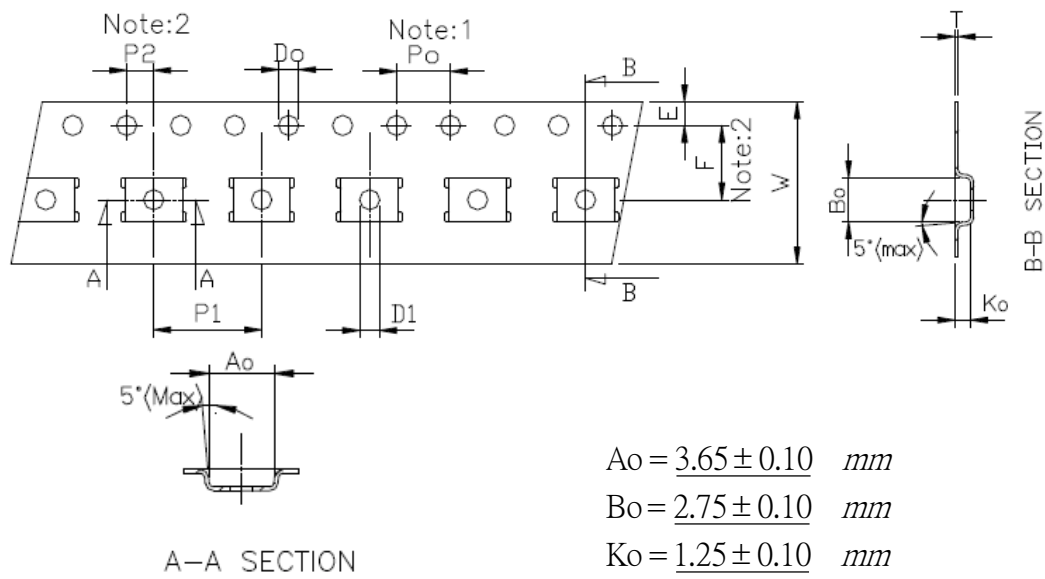

The reflow profile specified in this section describes expected maximum heat exposure of components during the reflow process of NMP product PWBs. Temperature is measured on top of component. All components have to tolerate at least this profile five times (5x) without affecting electrical performance, mechanical performance or reliability.

Pb-free and Sn63/Pb37 reflow profile requirements for soldering heat resistance:
